INSTANT ALERT

An active threat's goal is a target rich environment. Be it a false alarms or vulnerable high-density areas designed for gathering, Shelter-In-Place (SIP) provides immediate awareness, signalling your safety protocol. Key fobs for designated staff and/or strategically placed wireless panic buttons can be used by staff and student body alike.

Affordable, Scalable, Easy to Install

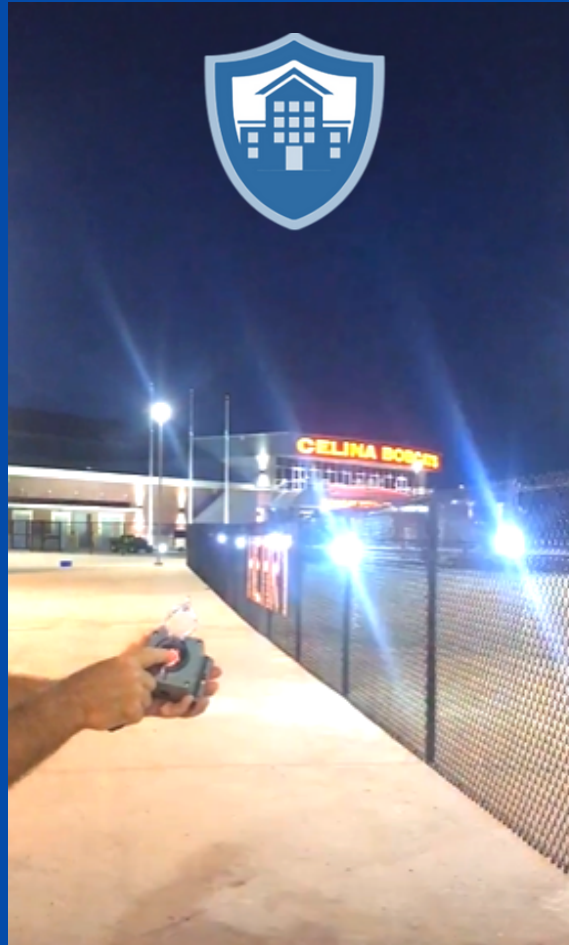

Wireless connectivity, redundant relay system and scale able design allows any facility to equip its most vulnerable first and build out as budget allows

Safety on a budget.

As you budget allows each system can grow at it own pace. High-density areas, hallways, and classrooms.

HOW IT WORKS

One-Touch Audio/Visual Alert

Our active threat alert system leverages Tescor Products legacy strobes designed & Made in USA.(Blinking worldwide since 1980.)

Wireless Relay

Low frequency wireless technology for optimal penetration and bounce. Our strobes "talk" to each other, seamlessly creating a chain of awareness. Line of site is not required. Low tech, high performance, easy to install.

Audio Visual

Audible and visually equipped to alert staff and students to clear the halls, lockdown classrooms and activate your specific safety protocols.

Estimates

Every building is unique and placement of SIP strobe locations many need slight adjustments during installation. Your building construction, layout and desired coverage are directly related to the final cost.
